

Megayachts Equipment

For almost half a century, we have been designing and manufacturing deck equipment.

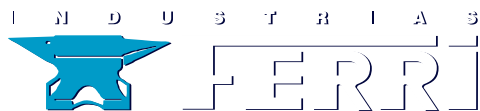

We also design and manufacture special machinery for the mining, demolition, energy and other industries with very specific and particular requirements.

Moreover, we develop engineering, maintenance and technical services, and inspections.

We have customers on 5 continents. Ship-owners and operators of special vessels with technically advanced deck machinery: warships, seismic vessels, oceanographic vessels, vessels for archeological work, for underwater operations, for oilfield support, cable layers, etc. and also mega yachts.

We have customers who are a worldwide point of reference in their areas of activity, something which we are deeply proud of.

We fully understand the special requirements of the mega yacht equipment industry, where the finish is perfection, to the highest standard, and where service must be, not only 24/7/365, but also impeccable.

Essential to the product is the foreseeing of maintenance requirements, right from concept design: from operator personnel capacity, to the use of proven components that are available world wide. Together with this, we give service and support, before, during, and after delivery, 24/7, in any part of the world, and we have trained and qualified technicians ready to sail at any time.

vision-mission

Our vision:

- Sustainable development requires specialized machinery and technical services that can responsibly and efficiently take on the diversity of contemporary technical challenges.
- Technical advances and the optimization of resources require experts who are able to comprehend the client's specific needs and problems in order to develop customized equipment and services that will satisfy the client's every demand.
- With total respect for the environment, INDUSTRIAS FERRI will continue to contribute improvements and innovation to the development of machinery and services.
- Our vision is focused on the absolute satisfaction of our clients by searching for the most innovative and reliable technical solutions.

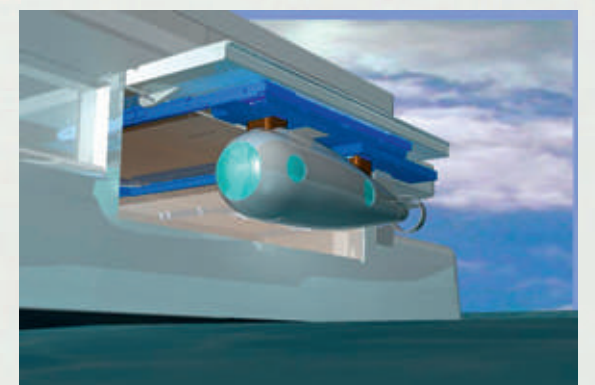

Our mission:

- We work to deliver equipment and services which we custom develop to resolve our clients' specific needs.
- We tackle successfully and with economic solvency the development of projects which are delivered on time, according to specification and within budget.
- We take on projects which we can be proud of and that earn our clients' recognition.
- In all our activities, we defend our business solidity, seriousness, and efficiency.
- We keep the highest standards of industrial, labor, commercial, and environmental ethics and responsibility.
- We improve by applying our knowledge and experience to all our products.

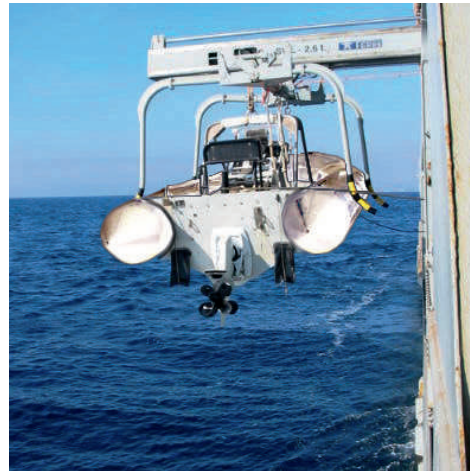

Our specialty is the development of specific, unique, equipment, whether just based on an idea, or to satisfy a technically complex requirement.

Developing a solution based on your own ideas or needs is both our greatest challenge and our principal motivation.

We are constantly working on the development of deck equipment, specially that related to cargo handling, launching and recovery of boats, or other equipment, and international regulations of any classification society, regulatory body, engineering and industrial standards (ABS, BU, GL, LRS, DNV, RINA, MCA, USCG, API, NATO, DIN, ISO and so on...).

We are used to coordinating with other companies in the development of any project, regardless of its complexity, something which for mega yacht elements can be critical, especially in all matters relating to final finishes, from paint to the use of very specific materials such as fine wood, synthetic fibers, special alloys, etc.
